

January 5, 2012

To FCC:

The FCC should NOT grant LightSquared's request to use GPS frequencies for communication. LightSquared's plan has been proven to cause significant interference to high-precision GPS signals. This plan will not only harm the surveying, construction, and agriculture industry, it will also disrupt interstate commerce and hundreds of thousands of people who use high-precision GPS data to make decisions. I am sending this letter to you to urge you to oppose LightSquared's request.

Sincerely,

Scott A. Sump
